

Safety and Health Promoting Community (SHPC) model- Study Protocol  
2014-2016  
by  
Mohammad Saadati

Injuries with an upward trend account for the third cause of death, in Iran, which indicates that improper lifestyle had lead to more noncommunicable diseases. Failure to collaborate intersectorally and feeble public participation made it necessary to apply community based approaches toward injury prevention and health promotion. The current study integrated concepts of safety promotion and health promotion .in the form of a framework, then employed it in East Azarbaijan province, Iran
